

The SSL iGate Security Advantage

SafeEnterprise SSL iGate includes:

Integrated iKey 2-factor authentication

SSL iGate includes 5 iKey USB tokens

Extensive client side security checks status of:

- Firewall*
- Virus protection**
- Windows update
- Windows service check
- File digital signature check
- Administrator selected registry keys
 - IP address

Client side cache cleaning

Roles based fine-grained access control

Application level access control

Session auto-logout when iKey removed

Admin selectable registry key policy

Hardened appliance

Hardware SSL acceleration***

HTTP compression***

Supports Web and client/server applications

Supports both Microsoft® and Sun® Java virtual machines

SafeEnterprise SSL iGate

Encrypted Secure Remote Access and Communication over the Internet...wired or wireless.

SafeEnterprise™ SSL iGate, a SSL VPN appliance with integrated iKey two-factor authentication identity management delivers cost effective secure remote access to applications and data, over the Internet, leveraging the proven security of SSL encryption built into a Web browser to create an encrypted tunnel for secure communications, wired or wireless with integrated 3A security: **Authentication, Authorization, and Audit.**

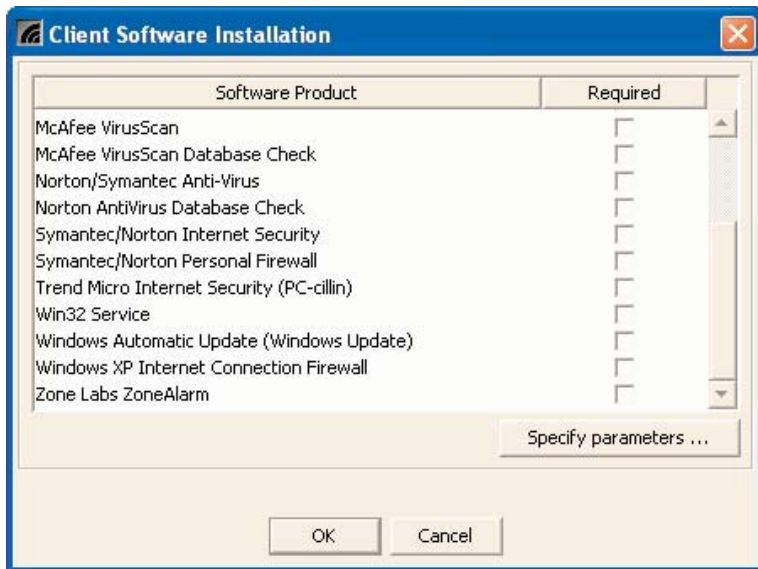

The SSL iGate ensures the security of your information in motion in the following ways:

- Instant SSL encryption of all communications over the internet from a standard web browser— from anywhere
- Extensive client side security checking ensures that your network is protected against Trojans, viruses, worms or hackers.
- 3A security
 - **Authentication**—who is requesting access
 - Integrated two-factor authentication including support for SafeNet iKey, RSA SecurID, or standard user name and password or any combination in mixed mode environment—validates the identity of a remote users before access granted

- **Authorization**—what are they permitted to access
 - Fine grained access controls ensures that users including mobile employees, suppliers, customers and/or corporate partners have access only to the applications, data and resources that they are permitted to access based their user roles/ group permissions
 - Central administration of users rights by Group, Role and Application
- **Audit**—what did they access
 - SSL iGate Tracks, monitors and logs the activity of every user on the network

SafeEnterprise SSL iGate ROI

- Application proxy —significantly reduces Web server exploitation risks
- Increases security by decreasing unauthorized access with 3A Security and iKey two-factor Authentication
- Decrease costs- significantly reduces end-user access and support costs with low-cost internet connectivity from a standard web browser
- Increase productivity and user satisfaction with increase in remote user's ability to successfully connect from anywhere- hotel, customer site with no firewall's to traverse
- Easy to deploy - no client side software to deploy, manage or support- only need a browser

- Installs quickly - appliance drops in behind firewall and in front of application servers with no modification or reconfiguration of existing network infrastructure required
- Increase wireless communications deployment- 802.11 compatibility ensures SSL encrypted secure wireless communications between the network and mobile user

SafeEnterprise iGate Audit Reporting Tool (IRT)

SafeEnterprise SSL iGate is the only SSL VPN to offer powerful, alarms-based reporting.

The key benefits are:

- Access is managed centrally like all other resources
- Usage summary by group, user or resource
- Alarms-based reporting highlighting anomalies
- Graphics representation of access by date, usage or group

Administration Tools

The SafeEnterprise SSL iGate has a variety of administrative options to fit in to any environment:

- Web-based configuration utility
- Advanced user, resource and iKey management software
- A full featured Command Line Interface (CLI)
- Common interface for managing multiple units

Ease of Use

The SafeEnterprise SSL iGate provides end-users easy to use remote access that is available anywhere.

- Connect from anywhere with a standard web browser
- Friendly Portal Access to Resources, Application and data
- NO VPN Client needed to install and maintain
- User access to web and non-web applications

Features and Benefits

Secure Application Proxy

- Protects against server vulnerabilities
- Authenticates all traffic
- Internal site protection
- No bridging of networks—terminates sessions between it & client application

IU Appliance Hardware-based SSL Acceleration***

- SSL applied to all http data—applications don't need reconfiguring for SSL
- Central Certificate management
- Supports web/non-web applications
- Secure encrypted tunnel between client and network protected resources

Advanced Authentication

- Compatible with Radius, Active Directory, LDAP, and most PKI systems
- Username/Password support
- Integrated iKey USB token support
- RSA SecurID support
- Access control policies tailored to user roles/groups security levels
- Secure links automatically closed when iKey is removed
- Powerful, run-time client side security

Application Support

- Secure File Share Access (WebDav, SMB)
- Standards-based e-mail protocols (IMAP, POP3, SMTP)
- Web based email (OWA, Lotus Notes)
- Access to TCP based client/server applications
- Access to Telnet based resources
- Secure access to Terminal Server and Citrix (ICA)
- Secure Web and non-web Application Access

Upgrade Options

- High Availability back up appliance
- iKey secure authentication
- Flexible concurrent user bundles

Eliminates Browser Cache To Secure Public PC Access

HTTP Compression

Internal Site Exposure

- Consolidate multiple web servers through a single interface
- Compatible with all http based applications
- Hides underlying server names and structure
- Re-writes html code in real time

Secure Time-out Mechanism Protects Against Unattended Sessions

- iKey removal from USB port closes session
