INTELLIGIBLE

Firebox® X

The model-upgradeable, integrated security appliance that handles all your security needs, today and tomorrow.

Firebox® X – Integrated Security, Model Upgradeable

Firebox® X is the world's first fully model-upgradeable, integrated security appliance that adapts to and expands with your changing security needs.

WatchGuard® – The Security You Really Need.™

As a small- to mid-sized enterprise, keeping your network safe and your corporate assets secure is a difficult task. You've got a business to run, and may not have the time or resources to manage a disparate collection of security products and services. You need a solution that meets your security requirements today, and can adapt to your future business needs and the changing security landscape.

That's why you need WatchGuard Firebox® X. Firebox X redefines the way network security is delivered by making security on demand a reality. It provides essential protection for your business today, and is designed to expand to the level of security and performance you'll require well into the future.

Only WatchGuard offers an integrated security appliance at such an affordable price. Read on to learn how you can protect your network with Firebox X.

Firebox X – Integrated Security, Expandable Platform

If you're looking to protect your network while also protecting your security investment, take a look at Firebox X.

Traditional security solutions require you to buy lots of different appliances and cobble them together. Not Firebox X. We have integrated the security you need into a single platform. This way you deploy multiple security technologies and services on a single appliance, eliminating the cost of deploying and managing multiple point solutions to accomplish the same protection.

Firebox X can handle all your evolving network security needs. Full model upgradeability lets you turn your existing Firebox X appliance into any higher model, unlocking even greater potential with a simple license key. It's the strongest protection you can buy for the money.

Firebox® X

Integrated Security Appliance

Intelligent Layered Security – Now That's Smart

The security landscape continues to grow more complex and dynamic each day, along with the level of sophistication and frequency of malicious attacks. Such threats attack at multiple security layers, often simultaneously.

Using our Intelligent Layered Security architecture (Fig. 1), Firebox X is able to detect and respond in real time to network threats, while remaining flexible enough so that new layers of security can be rapidly added as emerging threats arise. The Intelligent Layered Security Engine acts as the central nervous system for the Firebox X. It collects and evaluates information from multiple layers, coordinating a strong defense and proactively reporting this information back to you.

The Intelligent Layered Security architecture deploys multiple security functions such as stateful firewalling, intrusion prevention, VPN, deep application inspection, gateway antivirus for e-mail, spam blocking, and web content filtering services. With a multi-layered defense built into a single architecture, Firebox X can efficiently drop different forms of hostile traffic at each layer. Since the layers team up to reinforce one another, each layer has less to process. The result: thorough security while maintaining performance across your network.

Fig. 1: The Intelligent Layered Security Engine monitors and directs actions throughout multiple layers, coordinating a strong defense while maintaining high performance. ►

“ THE PERFORMANCE HAS BEEN FANTASTIC. EVERYBODY IS HAPPY, WHICH IS THE MEASURE I USE FOR SUCCESS. OUR FIREBOX FIREWALL PRODUCT HAS TRULY WORKED SEAMLESSLY. ”

—Garth Wermter, Director of Technology, 9-11 Commission

Intuitive User Experience – Centralized Management

With WatchGuard® System Manager, you'll feel empowered by a management system that helps you rather than confuses you. It aggregates all aspects of Firebox X management and reporting into a single intuitive interface, so you always know what's happening.

WatchGuard System Manager (Fig. 2) enables you to graphically view your network, so you can simply and quickly configure baseline security policies through icon-based secure, central management. You'll save time managing remote users and offices with a drag and drop interface that lets you create VPN tunnels in three simple steps. And with minimal effort, you can generate reports that help you quantify the level of security you are providing.

With WatchGuard System Manager, you can centrally manage one or more Firebox X appliances. Should your network grow, simply buy more WatchGuard System Manager licenses to manage your additional WatchGuard appliances. This allows you to retain the same centralized management console whether you are managing one or 100 devices.

LiveSecurity® Service – Expert Guidance and Support

Constant vigilance is crucial to the success of even the best security solutions. That's the job of LiveSecurity® Service, the most comprehensive bundled support offering in the industry. With LiveSecurity Service on your side, you'll gain the upper hand on threats to your network's security.

By activating your subscription, you'll be covered by our industry-leading suite of renewable services. This includes software

updates, technical support, advance hardware replacement, training and tutorials, self-help resources, and our industry-recognized LiveSecurity Broadcasts – alerts sent out by our dedicated team of network security experts that immediately notify our customers of new threats and what they can do to address them.

We Understand Your Security Needs

At WatchGuard®, we know you need your security solutions to do their job, so that you can do yours. We understand the challenges involved in managing multiple security solutions. We also know you want to reduce the number of systems and appliances needed to manage your security, while still being able to scale and expand the level of security you need as your business grows.

Put WatchGuard, and the new Firebox X, to work for you today.

- The only integrated network security appliance that combines all the security you really need into a single platform.
- Model-upgradeable, so that your existing appliance can be upgraded to any higher model with a license key, giving you security on demand, now and well into the future.
- The best total cost of ownership in the industry.
- Our Intelligent Layered Security architecture detects and blocks – in real time – new threats, while being able to rapidly accept new layers of defense as needed.
- An intuitive interface gives you a single view into your entire security network.
- LiveSecurity® Service provides expert guidance and support, and a renewable suite of services.
